

Think Beyond the Needle

IV medication and fluid administration can be difficult or impossible in certain patients. It's expensive and requires a high level of care. In addition, it can increase infection rates, injure veins, and cause patient pain.

It's time to think beyond the needle.

Faster. Safer. More Cost Effective.

When the oral route is compromised, knowledgeable clinicians turn to the Macy Catheter®. The Macy Catheter is the best alternative for rapid administration of medication and fluids.

Patented and FDA cleared, the Macy Catheter provides access to the clinically proven rectal route of delivery. It can be used in multiple settings, including the emergency department. The Macy Catheter improves patient care and nursing efficiency while decreasing the cost of care.

The Best Alternative: The Macy Catheter

- Facilitates quick and effective symptom management and decreases the burden of care.
- Proven to provide significant cost savings and improved nursing efficiency.
- Provides a less invasive way to administer fluids/meds when IV access is difficult or not indicated.
- A good option for patients who resist needles.
- Easy and safe for clinicians to use, requires minimal training.
- Allows discharge of patient to the home, skilled nursing, or hospice setting.
